

Documentum ApplicationXtender Workflow Manager

Advanced process management and analytics for increased productivity, reduced cycle times, and improved worker efficiency

The Big Picture

- Quickly model, design, and deploy process automation, integrate with third-party applications, build forms, and centrally manage business processes
- Monitor process performance with Process Analytics
- Optimize your processes based on analytics by locating bottlenecks and inefficiencies
- Maximize investments in current and future IT infrastructure

Today's business processes are complex, often involving several departments, organizations, and even outside companies. Building effective business processes—and monitoring and optimizing them—can greatly improve both employee efficiency and customer satisfaction. Locating a solution that is easy to install, implement, and use is the key to a fast return on investment (ROI).

EMC® Documentum® ApplicationXtender® Workflow Manager is an advanced workflow solutions and process manager and analyzer. Built on Microsoft .NET, Workflow Manager provides a platform that easily integrates with existing business applications. Workflow Manager offers complete capabilities for creating departmental and horizontal workflow solutions designed to improve efficiency in business processes.

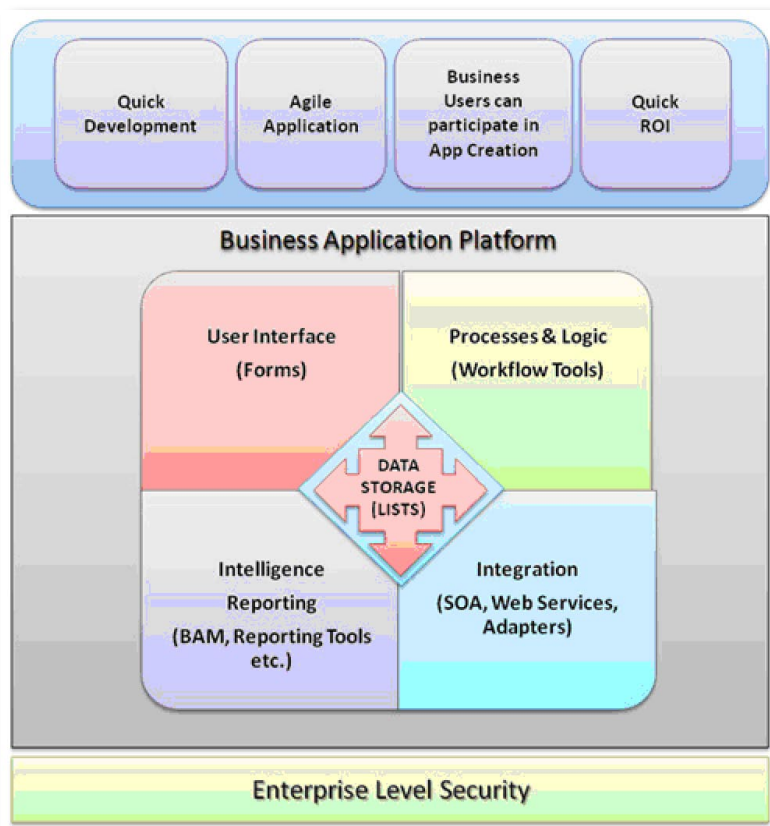

Workflow Manager enables organizations to improve business performance and reduce costs within and across functional business units. Productivity is increased because manual, document-intensive processes—such as processes found in accounts receivables and loan origination, for example—are reduced through tools that allow a business analyst to design, test, implement, analyze, and manage automated workflows. With features including out-of-the-box workflow samples, a user-friendly Process Builder and built-in reporting and forms support, designing and managing business processes has never been easier.

By creating automated business processes with Workflow Manager, departments and/or businesses can enjoy the following benefits:

- Automated processes resulting in reduced labor requirements
- Greater visibility of process performance and bottlenecks resulting in greater process efficiency
- Audit trails for both visibility and compliance requirements and initiatives

Features and benefits

Discover, analyze, and design	Use the Visual Process Designer to build workflow automations.
Workflow console	Centrally integrate, categorize, and manage your processes.
Built-in .NET	Enjoy maximum customization and advanced integration using .NET.
Out-of-the-box workflow samples	Implement a workflow solution in minutes.
User-friendly Process Builder tool	Design, test, and implement without coding or IT support.
Built-in reporting and forms support	Monitor and analyze user and process performance with built-in reports. Use the provided forms templates or create your own.
Support for Microsoft SQL and Oracle DB	Ensure ease of implementation and compatibility with support for the latest databases.
